What is our strategy for the future?

Deal with a number of challenges:

- To meet ever greater demand from the public and a very ambitious plan for the political mandate covering the period 2014 / 2020
- To deal with a general context of limited room for manoeuvre in management by local authorities and thus reduced funding
- To regard green and natural spaces in the urban situation as a real asset:
 - For human health
 - For the quality of life
 - For the economic attractiveness of the city
 - To combat global warming
 - As a support to halt the loss of biodiversity

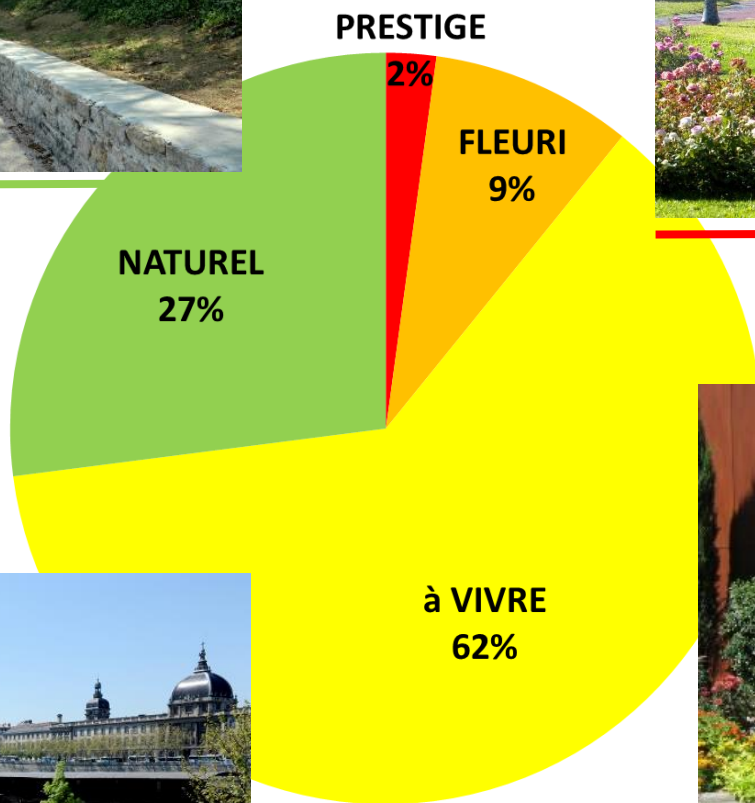

How will we rise to these challenges?

- By pursuing a balanced urban development policy which takes into account the place of plants in the city
- By pursuing an optimised management policy for Lyon's green spaces
- By communicating more so as to share these developments to meet the expected uses of these green spaces
- By encouraging participatory approaches and private action
- By optimising management and pursuing differentiation of the green spaces
- By reducing all our cost of maintenance

Optimising Management

- A concrete example in an *arrondissement* of Lyon

Category 2

2008

Category 3

2015

The Key factors for evolution and success

- To be effective advisors / communicate / promote
- We are decision-makers too
- To promote the essential positive factors of the parks
- To seek the population's support
- To be exemplary in our maintenance practices
- Economic quantifications are essential
- To enrich mutual knowledge with networks
